**POST STORM TIPS**

---

**STORM DAMAGE  
ITS INEVITABLE  
BE PREPARED**

## Post Storm Tips

- Take photographs of any signs of damage.
- Inspect your roof for damage. Look for any spots that may have come loose or blown off. If you suffered serious damage, consult with a roofing contractor. Do not attempt to get on the roof.
- Check for leaks by looking for water spots on ceilings.
- Check for down power lines and gas leaks. If you find either notify your utility provider. Do not approach a downed line.
- Avoid flood waters as the water could be contaminated or electrically charged from down power lines.
- Enter the building carefully. If your door sticks along the top as you try to enter stop and do not enter. This could be a sign of more severe roof damage.
- Do not light any candles, cigarettes or operate electrical switches in or around the house until the building has been inspected.  
When cleaning, never mix bleach with ammonia or products containing ammonia.
- Call StazOn Roofing
